

SHOULD I GET TESTED FOR COVID-19?

For all of the following scenarios, even if you test negative for COVID-19 or feel healthy, you should stay home (quarantine) since symptoms may appear 2 to 14 days after exposure to the virus.

- Close contact with someone who has COVID-19—will not have further close contact
- Close contact with someone who has COVID-19—live with the person but can avoid further close contact
- Under quarantine and had additional close contact with someone who has COVID-19
- Live with someone who has COVID-19 and cannot avoid continued close contact

Quarantine keeps someone who might have been exposed to the virus away from others. Quarantine helps prevent spread of disease that can occur before a person knows they are sick or if they are infected with the virus without feeling symptoms. People in quarantine should stay home, separate themselves from others, monitor their health, and follow directions from their state or local health department.

When to start and end quarantine: You should stay home for 14 days after your last contact with a person who has COVID-19.

Isolation keeps someone who is infected with the virus away from others, even in their home. Separate sleeping, eating and bathrooms as much as possible.

If you have any questions or concerns, call your provider's office, or the Walk-in Clinic at 307-688-9255.

Call 911 and seek emergency care immediately if you have trouble breathing, persistent pain or pressure in the chest, new confusion, inability to wake or stay awake, and/or bluish lips or face.
