<b>ABG: Oxygen</b>	
<b>ABG: Room Air</b>	
<p>This test may be done with the patient breathing room air or oxygen. If ordered on O2 it is important that the order includes the patient's current flow rate and delivery device.          **if the patient is normally on O2 and the physician wants to have the patient tested on room air, instruct the patient to leave their O2 on until they arrive in the CPS dept. Procedure takes approximately 20 minutes</p>	
<b>EEG:</b>	
<b>EEG: Sleep Deprived</b>	
<p><b>Prep:</b> Clean dry hair no sprays, gels or conditioners. No caffeine. Eat a light breakfast. <b>Adults</b>, no sleep 12 hours before study, <b>Children</b> call 688-2300 for instructions. It is recommended this procedure be performed with sleep deprivation because you are more likely to observe a seizure disorder. Procedure takes approximately 60 minutes</p>	
<b>EKG</b>	
<b>24 Hour Holter Monitor</b>	
<b>48 Hour Holter Monitor</b>	
<p><b>Prep:</b> Instruct patient to bath/shower before they come in for scheduled appointment and plan on returning the recorder 24 hours later. Please do not use lotions or creams prior to application. Procedure takes approximately 30 minutes.</p>	
<b>Oximetry: spot check</b>	
<b>PFT Screen</b>	
<p><b>Prep:</b> Instruct patient to refrain from using bronchodilators or caffeine for at least 4 hours prior to study. This test includes forced vital capacity and maximum voluntary ventilation only. Procedure takes approximately 30 minutes</p>	
	NO SMOKING
<b>PFT Pre &amp; Post BD</b>	
<p><b>Prep:</b> Instruct patient to refrain from using bronchodilators or caffeine for at least 4 hours prior to study his test includes forced vital capacity and maximum voluntary ventilation performed before and after an inhaled bronchodilator. Procedure takes approximately 45-60 minutes</p>	
	NO SMOKING
<b>PFT complete (lung Vol. + DLCO)</b>	
<p><b>Prep:</b> Instruct patient to refrain from using bronchodilators or caffeine for at least 4 hours prior to study. Procedure takes approximately 60-90 minutes. This test includes 3 types of lung volume studies, airway resistance, diffusing capacity, and the same tests as the pre and post bronchodilator study</p>	
<b>Bronchoprovocation Study - Methocholine challenge</b>	
<p><b>Prep:</b> Instruct patient to refrain from using bronchodilators or smoking or caffeine for at least 4 hours prior to study. No antihistamines 24 hours prior to the test. Procedure could take up to 4 hours. This test includes 3 types of lung volume studies, airway resistance, diffusing capacity, along with the administration of medication.</p>	
<b>Walking Desaturation Study</b>	
<p><b>Prep:</b> if patient is already on O2 have them come here on their prescribed flow rate Study will be started with patient at rest on room air. Procedure takes approximately 15-30 minutes</p>	
<b>VEP (Visual Evoked Potential)</b>
